SUMMARY

Creative solution provider with product design, software development and business management experience

EXPERIENCE

UX Product Designer, ION Investment Group Ltd
Horsham, Pennsylvania, United States
2014 – Nov 2025 (position eliminated due to company-wide restructuring)

- Principal product designer for concept to completion of B2B & B2B2C products
- Organized and led product team planning to clarify problems and pain points through product advisory board sessions with users, interviews with subject matter experts, and comparative analysis of other products.
- Collaboration with stakeholders and cross-functional teams to maximize attention to Interaction Design principles, while considering technical and resource constraints for timely delivery of software.
- Created personas and conducted Day-in-the-Life-Of planning to inform user-centered design decisions for complex workflows and streamlined decision making dashboards.
- Analyzed integration with IoT devices to allow user experience to blend manual and automated data capture for variable operational workflows
- Planning and execution of design solutions involved an iterative process of sketching concepts, progressively maturing from wireframes to higher fidelity designs, and periodic presentations of progress to senior management.
- Maximized user satisfaction through usability testing feedback and incremental improvements
- Attention to consistency and reusability of components within configurable dashboards that demand adaptive and responsive behaviors. Planning of content for mobile users and facilitation of mobile app store deployment.
- Guided product design decisions on complex data grid features impacting choices for data-dense decision support displays: virtual scrolling, progressive disclosure of information, real-time updates, and inline grid editing.
- Planned progressive steps to incrementally improve designs, to follow a lean and agile approach
- Leveraged Figma to design components, apply Design System tokens for consistency/brand themes, and publish prototypes for gathering feedback
- Researched and tested color contrasts for meeting WCAG 2.1 AA accessibility standards
- Heuristic evaluations of usability characteristics
- Information architecture planning and data modeling
- Planned SaaS admin dashboard and onboarding user experience for customer tenants
- Automated gathering of metrics from end user activity for analysis of usage and prioritizing work
- Worked with Product Owners to develop roadmaps
- Worked with scrum teams to assist with story development and backlog refinement in JIRA
- Communicated complex concepts to both technical and non-technical audiences
- Served as a UX thought leader by establishing a UX community of practice group that brought together multiple products

Lean & Agile coach, ION Investment Group Ltd
Horsham, Pennsylvania, United States
2013 - 2014

- Designed and managed implementation of Kanban management system for Financial Software Systems
- Acted as Scrum Master for multiple product teams practicing large-scale scrum across different time zones
